Less Blinding and Pegging

With Trellex Poly-Clean screening media, you can efficiently screen your material even in the most demanding conditions. Whether your feed material is damp and sticky or prone to pegging, Poly-Clean will screen it and produce a cleaner product. Each wire vibrates independently, which inhibits the buildup of material over the screening surface and thereby prevents blinding and increases the efficiency of the deck.

Longer Wear Life

Our manufacturing facilities with established processes and regular laboratory tests ensure constant high quality. The design of Trellex Poly-Clean offers a flat surface and eliminates wire-on-wire wear. This results in significantly longer wear life. Combining the wearresistant properties of polyurethane sealing strips with the high quality wire media, Poly-Clean lasts longer and outperforms traditional wire cloth.

Maximized open area

Trellex Poly-Clean offers the highest open area available on today's market. A broad

range of openings is available, all with highly accurate and precise openings no matter your application
